Education

Matoshri College of Eng & Research Centre, Nashik — **Nashik, India**
Bachelor of Engineering(Comp), *CGPA : 8.9/10 (Current)* — **July 2018 - May 2022**

Vivekanand Vidhya Vihar, Maral Sarovar, MP — **Khargone MP, India**
12th std, *Score : 77%* — **July 2017 - Apr 2018**

Vivekanand Vidhya Vihar, Maral Sarovar, MP — **Khargone MP, India**
10th std, *CGPA : 8.8/10* — **July 2015 - Apr 2016**

Skills

Programming Languages(Proficient) : Python.
Machine Learning & Deep Learning Stack : Numpy, Pandas, Scikit-learn, Tensorflow, Keras.
Data Visualization Stack : Matplotlib, Seaborn, Plotly Express and, Power Bi(Familiar).
Database Language : Sql.
Hardware Stack : Arduino, ESP01 and, ESP32.
Framework & Deployement Tool : Streamlit, Heroku.
Version Control : Git & Github.

Projects

Covid Detection from MRI's – Deep Hybrid Learning
- Built a **Hybrid Network** by combining **VGG16 Pre-trained Network** with **XGBoost Algorithm.**
- Used **VGG16 Network** for extracting useful features from the images and finally used **XGBoost** for classifying them.
- Finally trained whole network in just **21 sec** and at the end got accuracy of **98.32%**.

Potato Leaf Disease Detection – Deep Learning
- Built a **Potato Leaf Disease Detection** model using a simple and classical **Convolutional Architecture**.
- Finally, built a web app using **Streamlit** and deployed it on **Heroku.**

T20 International Score Predictor – Deep Learning
- Built a **Complex Neural Network Architecture** using **Keras Functional API's** to estimate match scores.
- Finally, built a web app using **Streamlit** and deployed it on **Heroku.**

WhatsApp Group Chat Analysis – Data Analysis
- Did a lot of **preprocessing**, **feature engineering** and, **analysis** to extract useful insights from the chat.
- At the end 15 useful insights generated along with **interactive visual charts**.

Customer Churn Prediction – Machine Learning
- Built an **End to End Machine Learning Pipeline** to assemble all preprocessing, model building and, model tuning techniques and finally execute it as a single entity.
- Different **Ensembles Techniques** have been used for model building and at the end got the accuracy of 80%.

Achievements and Extra-curricular

Participated in Blogathon 7 & 8 (Analytics Vidhya)
- 10+ Machine Learning & Deep Learning Articles got published at World's Leading Data Science Portal "**Analytics Vidhya**". At the end became a member of **"Analytics Vidhya Creator Club".**

Published WhatsApp Group Chat Analysis Package at PyPI
- This package will take whatsapp group chat text file as input, perform **ETL**, and finally generate insights in the form of **visuals**.
- More than **15** methods are available which will generate **interactive visuals** in just 2-3 lines of code.
